

### To prepare the code:

Download zip file from LumiNUS and extract to local drive (e.g.:  
D:\IRS-PRMLS-2019-09-10-IS1PT-GRP-FlowerPower\)

### To prepare the data:

1. Download zipped data set: *flrnonflr-dataset.zip* from link:  
[https://drive.google.com/drive/folders/1G13izEO\\_Oxs-4vOFDaFvAHjrwu-xibDN?usp=sharing](https://drive.google.com/drive/folders/1G13izEO_Oxs-4vOFDaFvAHjrwu-xibDN?usp=sharing)
2. Copy and unzip into the same directory of the npz file (e.g.:  
D:\IRS-PRMLS-2019-09-10-IS1PT-GRP-FlowerPower\npz\).  
Please note the location should align with the path with *np.load(<path\_to\_npz>)* in code

(Note: more data with different pixel sizes and splits can be found at:

[https://drive.google.com/drive/folders/1\\_D9W2\\_4\\_8uSFNBHjEh0BIZJK846ujYEE?usp=sharing](https://drive.google.com/drive/folders/1_D9W2_4_8uSFNBHjEh0BIZJK846ujYEE?usp=sharing))

### To prepare the Conda Environment:

1. To run *Image\_Classification\_Neural\_Network\_Final.ipynb*:
  - Open Anaconda command prompt
  - `$ cd <code directory>` (e.g.: D:\PRMLS-MR-2019-09-10-IS1PT-GRP-FlowerPower\)
  - `$ conda create --name tf-gpu`

```
(base) D:\personal\NUS\Sem2\PRMLS\CA2\PRMLS-MR-2019-09-10-IS1PT-GRP-FlowerPower>conda create --name tf-gpu
WARNING: The conda.compat module is deprecated and will be removed in a future release.
Collecting package metadata: done
Solving environment: done
```

- `$ conda activate tf-gpu`
- `$ conda install -c aaronzs tensorflow-gpu`

```
(base) D:\personal\NUS\Sem2\PRMLS\CA2\PRMLS-MR-2019-09-10-IS1PT-GRP-FlowerPower>conda activate tf-gpu
(tf-gpu) D:\personal\NUS\Sem2\PRMLS\CA2\PRMLS-MR-2019-09-10-IS1PT-GRP-FlowerPower>conda install -c aaronzs tensorflow-gpu
```

```

```

- \$ jupyter notebook

- To run specific VGG/AlexNet models, use: Conda ENV given from PSUPR-Day5 workshop: *ml1P13* (with GPU)
  - Open Anaconda command prompt
  - \$ cd <code directoty> (e.g.: D:\PRMLS-MR-2019-09-10-IS1PT-GRP-FlowerPower\)
  - \$ conda create -n ml1P13 python=3.6 numpy=1.15.1 opencv=3.4.2 matplotlib=2.2.3 tensorflow=1.13.1 tensorflow-gpu=1.13.1 cudatoolkit=9.0 cudnn=7.1.4 scipy=1.1.0 scikit-learn=0.19.1 pillow=5.1.0 spyder=3.3.2 cython=0.29.2 pathlib=1.0.1 ipython=7.2.0 yaml pandas keras keras-gpu pydot graphviz
  - \$ conda activate ml1P13
  - \$ jupyter notebook
- To run specific ResNet/Inception/Inception ResNet/SE Inception ResNet models, use: above created local Conda ENV: *tf-gpu*.
- To run models without GPU is not recommended as it can take long hours to run through the training section. Instead, please use colab at: <https://colab.research.google.com>, enable GPU and mount/upload respective dataset.

### **To run the code:**

After jupyter notebook was launched, click run all or run each block individually.
